

The Daessy Mounting System has been proven world-wide for over 20 years and is considered by many to be the most versatile, comprehensive and robust mounting system available. The staff of Mounts & More have over 15 years experience of supplying Daessy Mounts throughout Europe and in that time have built up considerable knowledge of customer mounting requirements and preferences as well as the most appropriate mounting solutions for individual wheelchair makes and models. With many different styles of clamps and mounts to fit most wheelchairs you can be assured that a Daessy Mount can position your device where you need it.

It is important to us that the mounting system we supply is the most appropriate for your specific requirements. As the mounts are all modular you will not be supplied with a 'one size fits all' system - with different tubing lengths, frame clamp assemblies and quick-release base styles each mount can be tailor-made for the client. In order to achieve this we are happy to discuss your individual requirements.

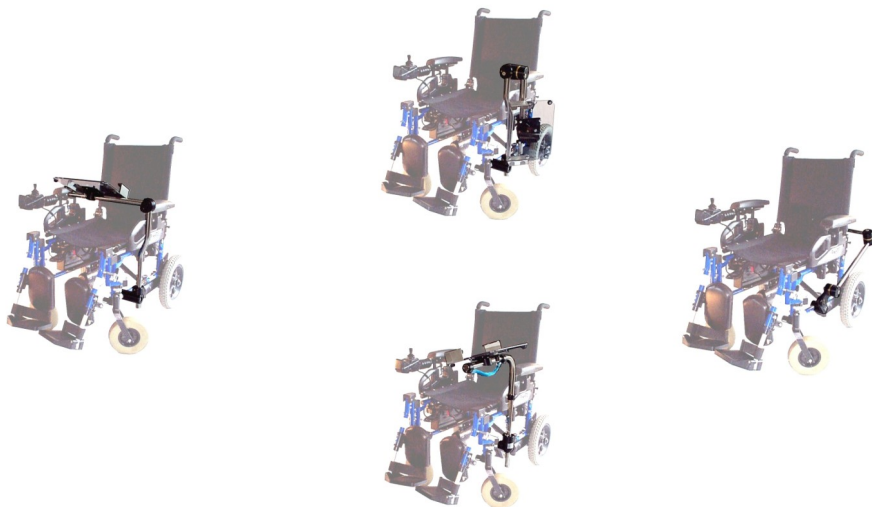

All Daessy Mounts are supplied with fitting tools and instructions and there is no charge for telephone assistance when fitting! However we do offer a (chargeable) fitting service in mainland UK excluding Highlands & Islands, if required.

Please do not hesitate to contact us to discuss your requirements.

Prices shown are correct at 23rd September 2011 but subject to change. Prices do not include delivery.
